

In Marian's honor, her husband Dr. Herbert Kleber, their children and stepchildren, Elizabeth Kleber, Marc and Judith Kleber, Pamela Kleber-Shad and Rees Shad, Eric and Reva Fischman, Sharon Fischman and Michael Lazar, and Amanda and Matthew Henshon, in collaboration with many colleagues, both in CPDD and all across the country have established the CPDD Marian W. Fischman Memorial Lectureship. It is fitting that the first lectureship established by CPDD be in remembrance of Marian, who was not only a wise, loving, and brave human being, but an outstanding scientist and mentor as well.

Previous Recipients of the Marian W. Fischman Memorial Award

2002	Chris-Ellyn Johanson
2003	Maxine Stitzer
2004	Nancy K. Mello
2005	Mary Jeanne Kreek
2006	Linda Dykstra

6th Annual
Marian W. Fischman
Memorial Lectureship

Award Presented to Dorothy K. Hatsukami
by Jack E. Henningfield

Monday, June 18, 2007 at 5:00 PM
Hilton Ballroom, Hilton Quebec Hotel
Quebec City, Canada

**MARIAN W. FISCHMAN LECTURESHIP
2007 AWARDEE**

Dorothy K. Hatsukami, Ph.D.
Professor
Department of Psychiatry
University of Minnesota Medical School

Dorothy Hatsukami, Ph.D. is the Forster Family Professor in Cancer Prevention and Professor of Psychiatry at the University of Minnesota, and Director of the Tobacco Use Research Programs. She has published extensively in the areas of nicotine addiction and its treatment among a general population of adult smokers, adolescents and smokeless tobacco users. She is currently a Principal Investigator of one of the NIH-funded Transdisciplinary Tobacco Use Research Centers (TTURC). This TTURC involves developing methods, measures and conceptual models for understanding tobacco toxicant exposure and its reduction. She is a co-recipient of the Ove Ferno award for her research on tobacco dependence. Because of her expertise, she has served on a number of national committees, including the National Advisory Council for Substance Abuse and Mental Health Services Administration, National Advisory Council on Drug Abuse, the Interagency Committee for Smoking and Health, Drug Control Research, Data, and Evaluation Committee for the Office of National Drug Control Policy, the Institute of Medicine and the Scientific Board of Counselors for the Intramural Research Program of NIDA. She is a past President of the Society on Research on Nicotine and Tobacco and past President of the College on Problems of Drug Dependence. She is currently the Treasurer of the College on Problems of Drug Dependence and has served in this position since 2004.

MARIAN WEINBAUM FISCHMAN
October 13, 1939 – October 23, 2001

Marian Rita Weinbaum was born in Queens, graduated from Barnard College, earned a M.S. in Psychology from Columbia University, and then a doctorate in Psychology from the University of Chicago in 1972. She then joined the Chicago faculty until 1984 when she moved to Johns Hopkins as Associate Professor in the Division of Behavioral Biology. In 1990, she was promoted to Professor at Hopkins. In 1992, she became Professor with Tenure at Columbia University where she co-founded the Division on Substance Abuse in the Department of Psychiatry with her husband, Herbert D. Kleber, M.D., and founded as well the Substance Use Research Center at the New York State Psychiatric Institute. Although Marian made important contributions to the study of treatment of heroin and marijuana abuse, her primary work was in the area of stimulants. Her Ph.D. thesis on methamphetamine, under the guidance of Bob Schuster and Lou Seiden, opened up the study of long-term methamphetamine toxicity. Her contributions to cocaine research fall in two principal areas. The initial one was to develop innovative techniques for the study of cocaine in humans. Hers was the first laboratory in the United States, in the mid-1970's at the University of Chicago, to be given permission to administer cocaine to human subjects and the first funded by NIDA for that work. She was the first investigator since Sigmund Freud to conduct controlled studies documenting the physiological and behavioral effects of cocaine in humans and the correlation between them. Her second major contribution was the development of unique protocols for assessing the efficacy of potential medications to treat cocaine abuse using a human laboratory model. In 1987, she received the first NIDA Merit Award, which provided 10 years of funding for these endeavors. Her protocol provided a bridge between pre-clinical studies with non-humans and large-scale out-patient trials, contributing an improved basis for developing substance abuse treatment interventions. Dr. Fischman was a mentor to a generation of young investigators and took a special pleasure in mentoring young women scientists about how to combine career and family. She was an inspiration to many women in the sciences and a passionate advocate both for research and how to carry it out ethically. Her three children and four grandchildren were a critical part of her life and a source of great pleasure. Her enthusiasm, joy for life, and her smile that lit up any room she entered were noted by all who knew her.
