

In Marian's honor, her husband Dr. Herbert Kleber, their children and stepchildren, Elizabeth Kleber, Marc and Judith Kleber, Pamela Kleber-Shad and Rees Shad, Eric and Reva Fischman, Sharon Fischman and Michael Lazar, and Amanda and Matthew Henshon, in collaboration with many colleagues, both in CPDD and all across the country have established the CPDD Marian W. Fischman Memorial Lectureship. It is fitting that the first lectureship established by CPDD be in remembrance of Marian, who was not only a wise, loving, and brave human being, but an outstanding scientist and mentor as well.

Previous Recipients of the Marian W. Fischman Memorial Award

2002	Chris-Ellyn Johanson
2003	Maxine Stritzer
2004	Nancy K. Mello
2005	Mary Jeanne Kretek
2006	Linda Dykstra
2007	Dorothy K. Hatsukami
2008	Edythe D. London
2009	Harriet de Wit
2010	Linda B. Cottler
2011	Bertha K. Madras
2012	Marilyn E. Carroll
2013	Kathryn Cunningham
2014	Amy H. Newman
2015	Kathleen Brady

*Annual
Marian W. Fischman
Memorial Lectureship*

*Award Presented to Marilyn Huestis
by Jack Henningfield*

*Monday, June 13, 2015 at 2:15 P.M.
Fiesta 6/8
La Quinta Resort and Club
Palm Springs, CA*

**MARIAN W. FISCHMAN LECTURESHIP
2015 AWARDDEE**

*Professor Marilyn Huestis
Chief, Chemistry and Drug Metabolism (retired)
National Institute on Drug Abuse
Baltimore, MD*

Professor Marilyn Huestis recently retired as Chief, Chemistry and Drug Metabolism, National Institute on Drug Abuse after 23 years. She is an Adjunct Professor, University of Maryland School of Medicine and has mentored 19 doctoral students. Her research program focuses on cannabinoid agonists and antagonists, *in utero* drug exposure, drugged driving and novel psychoactive substances. Professor Huestis has published 408 peer-reviewed manuscripts. She received a bachelor's degree in biochemistry, Mount Holyoke College, master's degree in clinical chemistry, University of New Mexico, doctoral degree in toxicology, University of Maryland School of Medicine, and honorary doctorate in Medicine and Surgery, Faculty of Medicine, University of Helsinki, Finland. Important awards include Saferstein Memorial Distinguished Lecturer Northeastern University, Kubaski Lectureship Award American Association for Clinical Chemistry (AAC_C), Distinguished Fellow Award American Academy of Forensic Sciences (AAFS), International Association of Forensic Toxicologists (TIAFT) Alan Curry Award, Outstanding Contributions in a Selected Area of Research AAC_C, International Association of Therapeutic Drug Monitoring and Clinical Toxicology Irving Sunshine Award, AAFS Rolla Harger Award, Sunshine Award for Outstanding Research and selection by *Clinical Chemistry* as an "Inspiring Mind." Professional service includes 6 editorial boards, National Commission on Forensic Sciences, World Anti-doping Agency's Prohibited List Committee, Organization of Scientific Area Committee on Toxicology, Transportation Research Board Committee on Alcohol and Other Drugs, and National Safety Council's Alcohol, Drugs and Impairment Division Executive Board. Professor Huestis is past president of the Society of Forensic Toxicologists and TIAFT, and past Chair of the Toxicology Section AAFS.

MARIAN WEINBAUM FISCHMAN
October 13, 1939 – October 23, 2001

Marian Rita Weinbaum was born in Queens, graduated from Barnard College, earned a M.S. in Psychology from Columbia University, and then a doctorate in Psychology from the University of Chicago in 1972. She then joined the Chicago faculty until 1984 when she moved to Johns Hopkins as Associate Professor in the Division of Behavioral Biology. In 1990, she was promoted to Professor at Hopkins. In 1992, she became Professor with Tenure at Columbia University where she co-founded the Division on Substance Abuse in the Department of Psychiatry with her husband, Herbert D. Kleber, M.D., and founded as well the Substance Use Research Center at the New York State Psychiatric Institute. Although Marian made important contributions to the study of treatment of heroin and marijuana abuse, her primary work was in the area of stimulants. Her Ph.D. thesis on methamphetamine, under the guidance of Bob Schuster and Lou Seiden, opened up the study of long-term methamphetamine toxicity. Her contributions to cocaine research fall in two principal areas. The initial one was to develop innovative techniques for the study of cocaine in humans. Hers was the first laboratory in the United States, in the mid-1970's at the University of Chicago, to be given permission to administer cocaine to human subjects and the first funded by NIDA for that work. She was the first investigator since Sigmund Freud to conduct controlled studies documenting the physiological and behavioral effects of cocaine in humans and the correlation between them. Her second major contribution was the development of unique protocols for assessing the efficacy of potential medications to treat cocaine abuse using a human laboratory model. In 1987, she received the first NIDA Merit Award, which provided 10 years of funding for these endeavors. Her protocol provided a bridge between pre-clinical studies with non-humans and large-scale out-patient trials, contributing an improved basis for developing substance abuse treatment interventions. Dr. Fischman was a mentor to a generation of young investigators and took a special pleasure in mentoring young women scientists about how to combine career and family. She was an inspiration to many women in the sciences and a passionate advocate both for research and how to carry it out ethically. Her three children and four grandchildren were a critical part of her life and a source of great pleasure. Her enthusiasm, joy for life, and her smile that lit up any room she entered were noted by all who knew her.
